Answer Practice B Classifying Polygons
Classifying Polygons Pages 470 - 474 A polygon is a closed plane figure with at least three sides. The sides meet only at their endpoints. A triangle is a polygon with three sides. You can classify triangles by angle measures. You can also classify triangles by side lengths. Tick marks are used to indicate congruent sides of a figure.

Section 9.3 ~ Classifying Polygons
Name the polygon by its number of sides. Then classify it as convex or concave, regular or irregular. There are 4 sides, so this is a quadrilateral. No line containing any of the sides will pass through the interior of the quadrilateral, so it is convex. The sides are not congruent, so it is irregular. Answer: quadrilateral, convex, irregular
