Lining materials protect the weak tooth from post-operative hypersensitivity, reducing patient discomfort and allowing the tooth to heal at a faster rate after the procedure. Some dental restorative materials such as acrylic monomers in resin-based materials and phosphoric acid in silicate materials may pose toxic and irritable effects to the pulp. Lining materials protect the tooth from the aforementioned irritants.

Dentures (also known as false teeth) are prosthetic devices constructed to replace missing teeth, and are supported by the surrounding soft and hard tissues of the oral cavity. Conventional dentures are removable (removable partial denture or complete denture). However, there are many denture designs, some which rely on bonding or clasping onto teeth or dental implants (fixed prosthodontics).
