Charles Darwin was humiliated when he dared reveal the results of his research. Many people attacked him when he declared that the human being is a descendent of primates. Nobody could admit that we are animals. Today this notion is accepted and Darwin's theory of evolution is taught in schools. However, his brilliant research was incomplete.

Human Behavior - From Charles Darwin's Evolution Theory to ...

The promise and perils of understanding human origins and behavior remained unavoidable parts of Darwin's agenda. If correct, evolutionary theory could provide powerful tools to understand human behavior, and if humans were not understandable in the terms Darwin set out, perhaps there were deep, general problems with his theory.

THE DARWINIAN THEORY OF HUMAN CULTURAL EVOLUTION AND GENE ...

Evolutionary psychology is a scientific discipline that approaches human behavior through a lens that incorporates the effects of evolution. It combines the science of psychology with the study of biology. Evolutionary psychologists seek to explain people's emotions, thoughts, and responses based on Charles Darwin's Theory of Evolution Through Natural Selection, similarly to how evolutionary biologists explain an organism's physical features.

Human Behavior and Evolutionary Psychology

Darwin wrote that humans and animals were descended from a common ancestor (this would develop into research in the 1900s and 2000s showing that humans and animals share the majority of their genes). Because Darwin stated that humans and animals have a lot in common, the field of comparative psychology (i.e., studying animals to learn about human behavior) increased in popularity.
