### Creating Simple Form using PHP and MySql - Sanwebe

The "sss" argument lists the types of data that the parameters are. The s character tells mysql that the parameter is a string. The argument may be one of four types: i - integer; d - double; s - string; b - BLOB We must have one of these for each parameter. By telling mysql what type of data to expect, we minimize the risk of SQL injections.

### PHP MySQL Prepared Statements - W3Schools

The GROUP BY clause: MySQL vs. standard SQL. Standard SQL does not allow you to use an alias in the GROUP BY clause, however, MySQL supports this.. For example, the following query extracts the year from the order date. It first uses year as an alias of the expression YEAR(orderDate) and then uses the year alias in the GROUP BY clause. This query is not valid in standard SQL.

### MySQL GROUP BY - MySQL Tutorial
