Skeletal Anchorage in Orthodontic Treatment of Class II ...

The advent of mini- or microimplants now provides the orthodontic profession with a viable option for skeletal anchorage. A recent term used to describe these implants for skeletal anchorage is temporary anchorage device (TAD). Considering the traditional implants in dentistry that are designed and manufactured for long lasting prosthetic replacements or for stabilization of removable prostheses, the term is fitting for the implants use in orthodontics.

requires the use of skeletal anchorage. FORESTADENTs Orthoeasy screws are known as reliable allies. Their clever design ensures secure anchorage even in difficult conditions. The results are predictable and undesirable side effects can be avoided.

FORESTADENT Skeletal anchorage

Skeletal anchorage is the most revolutionary technique developed in orthodontics in the past decade. While not every orthodontic patient needs it, many can benefit from it as it has the ability to: deliver predictable results. reduce treatment time. avoid headgear wear. avoid removal of teeth. avoid surgery.

Anchorage, resistance to unwanted tooth movement, is a prerequisite for the orthodontic treatment of dental and skeletal malocclusions. Absolute or infinite anchorage is defined as no movement of the anchorage unit (zero anchorage loss) as a consequence of the reaction forces applied to move teeth.
