The goal of unit testing is to isolate each part of the program and show that the individual parts are correct. A unit test provides a strict, written contract that the piece of code must satisfy. As a result, it affords several benefits. Unit testing finds problems early in the development cycle. This includes both bugs in the programmer's implementation and flaws or missing parts of the specification for the unit.

These tests are usually written by the developers of the module and in a test-driven-development methodology (such as Agile, Scrum or XP) they are actually written before the module is created as part of the specification. Each module function is tested by a specific unit test fixture written in the same programming language as the module.

LESSON In this lesson, you will learn how to develop a thesis statement A brief statement that identifies a writer's thoughts, opinions, or conclusions about a topic. Thesis statements bring unity to a piece of writing, giving it a focus and a purpose. You can use three questions to help form a thesis statement: What is my topic? What am I trying to say about that topic?
