Alternative Methods of valuation of Environmental Goods and Services: Methods of valuation of environmental goods and services may broadly be classified into two categories: (1) Pecuniary, and (2) non-pecuniary. Pecuniary valuation methods obtain the 'money equivalent' of these goods and services – money is used as the numéraire, while non-pecuniary methods, more general in nature, may use any numéraire for valuation.

## **Valuing Environmental Goods An Assessment Of The ...**

This special issue of Ecological Economics examines the state-of-the-art and science of benefit transfer for valuing environmental goods and services. Benefit transfer 1 uses economic information captured at one place and time to make inferences about the economic value of environmental goods and services at another place and time. Using this approach, economic estimates are either transferred as monetary value units (e.g., means or medians) or as value functions conditioned on explanatory ...

## **Valuing environmental goods and services using benefit ...**

Environmental valuation seeks to establish an explicit value, usually monetary, for environmental factors in order to help planning and decision making where, for example, the balance of benefit between development or preservation of natural resources must be weighed and loss or damage to environmental assets has to be priced.

Benefits of valuing. Both the public and the private sectors stand to gain from valuing the natural capital they depend on. Valuing natural capital enables governments to account for nature's role in the economy and human well-being. For businesses, it enables efficiency, sustainability, and managing risks in their supply chains.

In contrast, environmental valuation gives environmental impacts a monetary value so that they can be compared like-for-like with financial returns. A project is only judged efficient if the sum of its financial, economic and environmental benefits outweighs its costs in these areas. If its net environmental costs surpass its
